

QUICK TALK ON...

**CHIRP! THE EASY WAY TO SET UP  
YOUR HANDHELD**

Matt Gumbley MØCUV

WKARS Feb 2026

# SCOPE

- Why program your handheld?
- But there's an OEM program for that!
- What you'll need to use CHIRP
- Cloning / Changing Simpler radios (Baofeng, etc.)
- Issues with Quansheng custom firmware
  
- Examples given: Baofeng UV-5R & UV-5RH Pro /  
Quansheng UV-K5(8) IJV Mod

# WHY PROGRAM YOUR HANDHELD?

- Once you know how, cheap Chinese handhelds are usable from the keypad (unlike some Yaesu!)
- Entering one or two favourite frequencies or split/CTCSS details for repeaters is not a problem
- Good quick reference: <https://w7apk.com/baofeng>
- Single page cheat sheet PDF: <https://barconline.org/wp-content/uploads/UV-5R-Quick-Reference.pdf>
- Bulk entry can be **VERY** tedious
- Copying larger, customised configurations between radios is not a manual task - you need programming software!

# OEM (ORIGINAL EQUIPMENT MANUFACTURER) PROGRAMMING TOOLS

- Every manufacturer probably provides their own software and drivers
- e.g. <https://www.baofengradio.co.uk/software/>
- Most radios have a distinct way of managing their configuration storage - that OEM tools understand well
- Allows more advanced configurations & special radio options
- ... but can lead to a proliferation of programming tools as you acquire more radios!
- So: a need for a comprehensive tool that can program any handset.

# OEM BAOFENG SOFTWARE

- Cable chip drivers (see later slides)
- UV-5R Mini
- UV-5RH Pro (with GPS)
- UV-5RH
- UV-5R ("The World's Most Popular Radio")
- ... plus many other models.
- ... BUT DOES NOT SEEM TO WORK!

# CHIRP AND RT-SYSTEMS

- RT Systems (<https://www.rtsystemsinc.com/>) also provide commercial programming software and cables for over 600 radios
- You'd buy the variant for your radio - each variant costs \$25, with a cable around \$30
- CHIRP is Free Open Source Software, for ~ 710 radios (started around Aug 2008 by Dan Smith KK7DS)
- Available from <https://chirpmyradio.com>

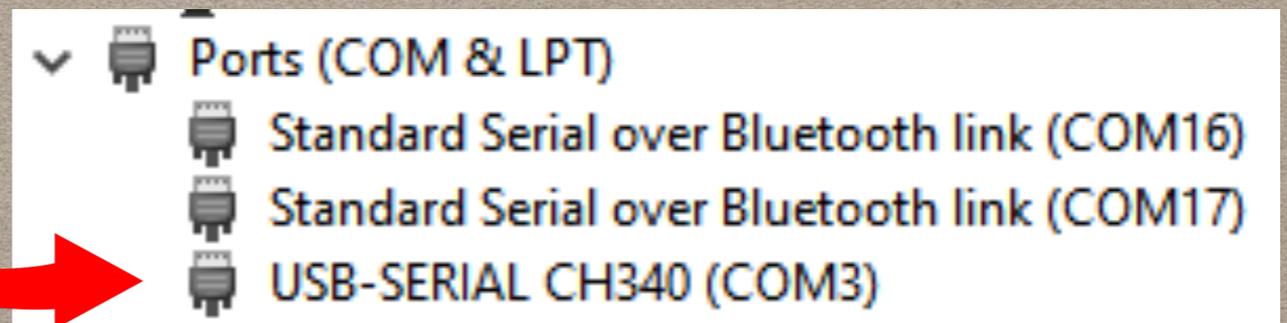

# WHAT YOU'LL NEED

- Programming cable - this style usually works with several types of cheap Chinese handset from Baofeng / Quansheng etc.
- A computer running:
  - \* Windows (10 and later, 64-bit only)
  - \* macOS (Big Sur and later, Intel or Apple Silicon)
  - \* Linux (any modern distro)

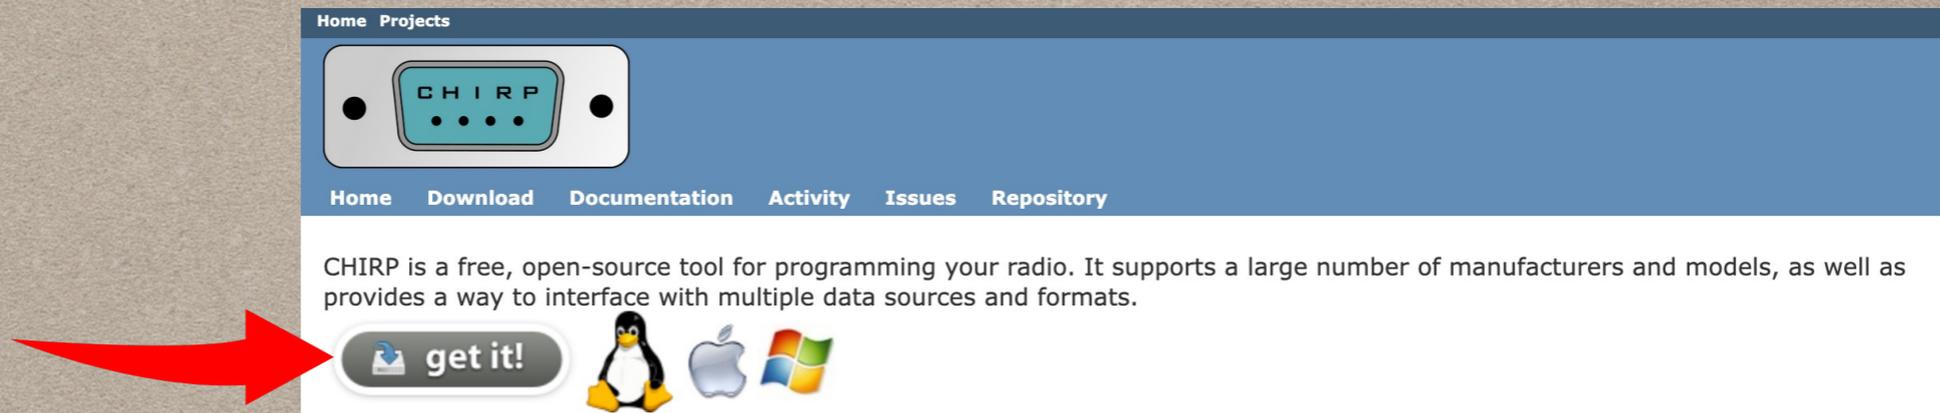

# CH340 DRIVERS

- Inexpensive programming cables use the CH340 USB CDC (Serial) chip
- Drivers / installation instructions for this chip (Windows, macOS, Linux) are linked in this article:
- <https://learn.sparkfun.com/tutorials/how-to-install-ch340-drivers/all>
- Also available from <https://baofengradio.co.uk/software>

# GETTING CHIRP

- <https://chirpmyradio.com>

- Two versions:
- CHIRP-next is a redesigned version - A new version of CHIRP-next is created each day from the work of the development community
- CHIRP-legacy is an old version that's no longer updated. Some old hardware may need it.

# DOWNLOAD CHOICES

	<a href="#">Name</a>	<a href="#">Last modified</a>	<a href="#">Size</a>	<a href="#">Description</a>
	<a href="#">Parent Directory</a>		-	
	<a href="#">chirp-next-20260130.app.zip</a>	2026-01-30 02:21	43M	MacOS Application
	<a href="#">chirp-next-20260130-win64.zip</a>	2026-01-30 02:20	24M	Windows standalone application
	<a href="#">chirp-next-20260130-installer.exe</a>	<b>2026-01-30 02:20</b>	<b>19M</b>	<b>Windows Installer (recommended)</b>
	<a href="#">chirp-20260130.tar.gz</a>	2026-01-30 02:20	2.4M	Source Tarball
	<a href="#">chirp-20260130-py3-none-any.whl</a>	2026-01-30 02:20	2.1M	Python 3 wheel
	<a href="#">build_info/</a>	2026-01-30 02:20	-	

- The recommended download for your OS will be highlighted in green...
- Download it, scan it for viruses, then install.
- You will probably get a warning from Microsoft Defender SmartScreen.
- Click 'More Info' and 'Run anyway'. Choose defaults.

# FIRST: DO NO HARM!

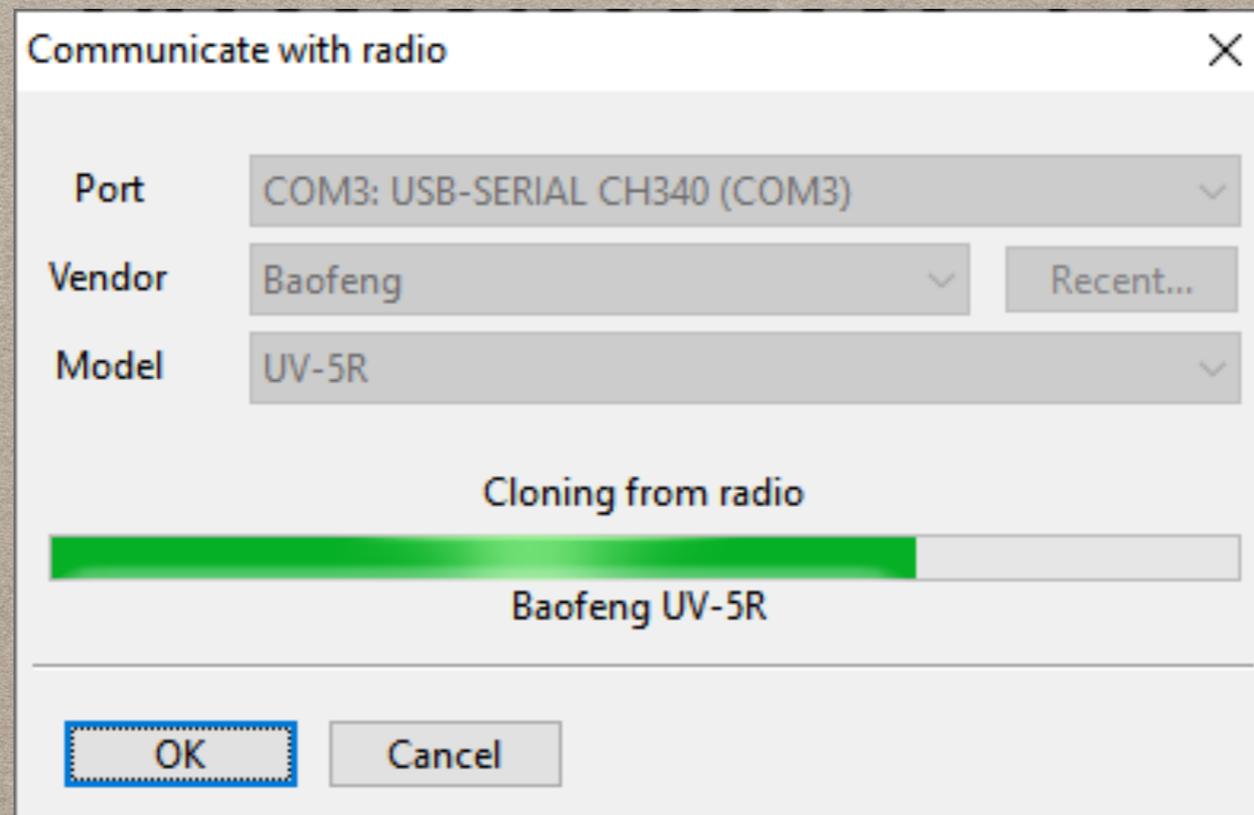

- Be careful: DO NOT KEY THE PTT WHEN THE RADIO IS CONNECTED TO THE COMPUTER!
- Probably best to set low power mode:  
MENU 0 2 MENU  /  MENU EXIT
- Also increase squelch, tune to unused frequency:  
MENU 0 0  /  MENU EXIT
- Before you do any programming - download the radio's initial configuration.
- This can be restored in case of mistakes.

# DOWNLOAD FROM RADIO

# DOWNLOAD FROM RADIO

- Click OK, and you'll see a flashing RED LED 

# SPREADSHEET VIEW OF MEMORIES

	Frequency	Name	Tone Mode	Tone	Tone Squelch	DTCS	RX DTCS	DTCS Polarity	Duplex	Offset/TX Freq	Cross Mode	Mode	Skip	Power	Comment

Baofeng UV-5R

# UPLOAD TO RADIO

- Click OK, and you'll see a flashing GREEN LED 

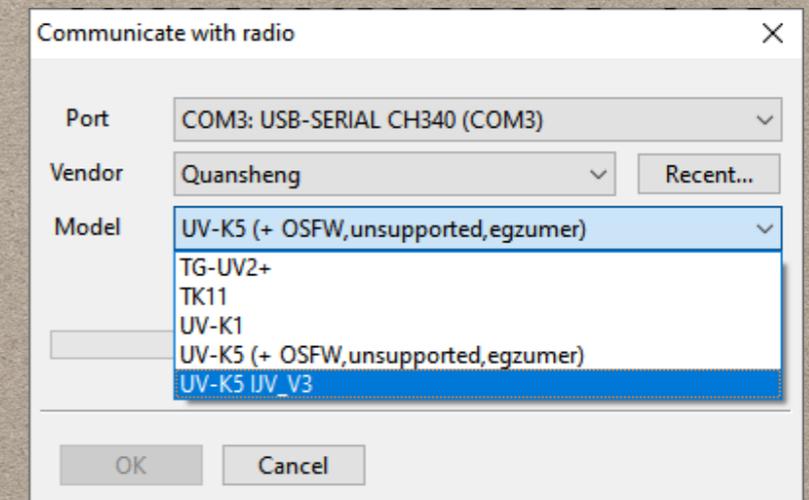

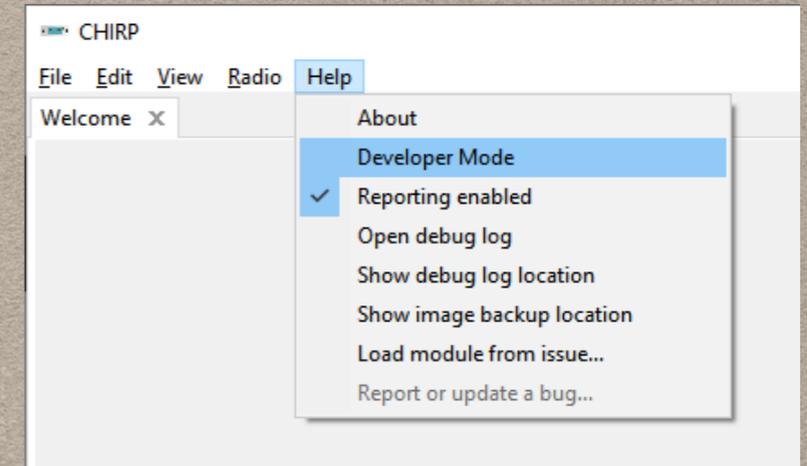

# QUANSHENG - MODIFICATIONS

- Quansheng UV K5(8) factory firmware is supported (just choose 'unsupported')
- IJV 3.60 firmware turns it into a different radio - 'upgrade' is not covered here!
- But CHIRP doesn't support it 'out of the box'
- IJV web page:  
[https://www.universirius.com/en\\_gb/preppers/quansheng-uv-k5-manuale-del-firmware-ijv\\_v3/](https://www.universirius.com/en_gb/preppers/quansheng-uv-k5-manuale-del-firmware-ijv_v3/)

# QUANSHENG IJV AND CHIRP

- Download IJV firmware:  
[https://www.domox.org/?file=firmware\\_IJV\\_V3.60.zip](https://www.domox.org/?file=firmware_IJV_V3.60.zip)
- Unzip this to a folder
- Open CHIRP
- Help menu / Developer mode. At the 'are you sure?' alert say yes, restart CHIRP.
- File / Load module (say yes).
- Choose IJV\_N3\_60.py (do this on each launch)
- Then read / write as usual. There are **MANY** settings!

*That's all Folks!*
